BTEC Tech Award Engineering Level 2 Curriculum Intent 2023-2024

Our curriculum at Brine Leas strives to present a range of opportunities for students to develop their breadth and depth of technical skills and knowledge. The students can then apply these along with scientific principles and mathematical skills to project-based problems and theoretical scenarios, establishing good habits of learning which encourage life-long learning. Students develop practical and technical skills as they design and make prototypes and products that solve real life problems within a variety of contexts, considering both the needs, wants and values of themselves and others. We will encourage students to take risks in their design approaches and aim to develop resourceful, innovative and enterprising young learners who can go on to be the next generation of engineers and practitioners. We deliver life skills, engineering skills, health and safety, teamwork, facilitated learning, confidence, workshop skills, Computer Aided Design and Computer Aided Manufacture, management skills, working independently. We have fantastic facilities with engineering machinery that mirrors industry. The core skills of English, Maths and Sciences are applied to engineering problem solving, designing and building. The specification covers modern engineering technologies, materials and processes, and established engineering practices. The 'hands on' project-based areas of this course provide challenging opportunities for personal development and opportunities for the academic learning to be seen and experienced as applied to a real situation. Completing this Engineering course provides advantageous preparation for students wishing to undertake further Engineering or technology-based education at KS5 and also provides experience and knowledge sought by employers in the industrial engineering community.

Students taking this course are exposed to a wide range of engineering processes including Computer Aided Design, machining, heat treatment, welding, fabrication and electronic circuits. Technically minded students will be inspired by these experiences and motivated to develop and apply their gained engineering knowledge during the major project task. Most pupils experience a massive sense of achievement as they complete the project and look back at their journey over the designing and engineering of a product and on their personal development.

The Vocational Award in Engineering has been designed to support learners in schools and colleges who want to learn about this vocational sector and the potential it can offer them for their careers or further study. This further study would provide learners with the opportunity to develop a range of specialist and general skills that would support their progression to employment.

Assessment

The following units will be delivered and assessed. Units 1 and 2 are based on an assignment brief will be provided by WJEC that will include a scenario and several tasks.

Unit 3 questions requiring objective responses, short and extended answers, based around applied situations. Students will be required to use stimulus material to respond to questions.

Unit	Title	Assessment
1	Manufacturing Engineering Products	20 hours 40% of
	Controlled assessment	qualification 80
		marks
2	Designing Engineering Products Controlled	10 hours 20% of
	assessment	qualification 40
		marks
3	Solving Engineering Problems Written	1 hour 30 minutes 40%
	examination	of qualification 80
		marks

Below are the assessment objectives for this specification. Students must:

AO1 Demonstrate knowledge and understanding from across the specification.

AO2 Apply skills (including practical skills), knowledge and understanding in a variety of contexts and in planning and carrying out investigations and tasks.

AO3 Analyse and evaluate information, making reasoned judgements and presenting conclusions.

Homework

Students are set homework to reinforce and practice the learning completed during lessons and to prepare for the external examination. Homework will be set fortnightly. Students are also expected to complete their portfolio tasks based on the units they are working on.

Clubs and/or intervention

Students are welcome to attend extra-curricular sessions, to make use of the workshop facilities, computers and CNC machines.

Parental/Carer support

Monitor progress and encourage the completion of the unit portfolio. Encourage the watching of 'how it's made', 'Forged in Fire', 'Mega Engineering' type of programs.

Helpful sources of information

The intranet contains various files and documents to assist with completion of this course and is available via the school computers and also from any internet linked home computers via the portal. Useful websites: https://www.heta.co.uk/

http://www.ceata.co.uk/ https://www.raf.mod.uk/ https://www.bbceng.info/ www.technologystudent.com

Connections to future pathways

Careers: mechanical technician, maintenance technician, mechanical engineer, production engineer, automotive engineer, maintenance engineer, design engineer, structural engineer, ergonomics adviser, test engineer, production engineer, product designer, industrial designer, materials laboratory technician, production planner, quality inspector, quality engineer, crash test investigator, welding and fabrication technician, CNC Operative, health & safety officer

Future learning: Level 3 BTEC National in Engineering, Technical certificate in Engineering, General Engineering, Product Design A-level

Degrees, including: Engineering, Product Design, Physics, Maths

Year 10 Overview

⁻ erm K	Knowledge	Assessment	Connections to learning
--------------------	-----------	------------	--------------------------------

		What is Engineering?	
	their future position within the national and global engineers are needed, and the country is sho students to apply their math	dge of what engineering is about in order for them to I economy. The UK is aiming to develop a new smar ort of engineers. Engineering covers a wide range of ematical, scientific and engineering skills to real-life	t style of engineering for which disciplines that will enable problems.
Autumn 1	 Students should have increasing confidence in the knowledge required to perform the following: Read and understand orthographic drawings. E.g. the conventions of dimensioning and tolerances. Measuring and marking out methods. Turning, using manual or CNC lathe. Cutting using hand tools. Drilling, using both pillar drill and lathe, Using a jig Know how to calculate Areas, Volumes for a range of 2D and 3D complex shapes. Know how to calculate Density 	 Application of skills through completion of set practical tasks. Application of knowledge through written short answer questions and completion of set drawing exercises. Examination style written questions. 	 Prior learning in D&T (Y7-9) Templates and drawings to follow and create. Manufacture of products Evaluation of outcomes Future learning in Engineering Read an engineering drawing when responding to an engineering brief (Y11) Prior learning in D&T (Y7-9) Manufacture of products Evaluation of outcomes Future learning in Engineering Read an engineering drawing when responding to an engineering Read an engineering drawing when responding to an engineering brief (Y11)

	What is it made of?	
owledge and understanding of the following groups mmon materials based on their physical appearance oughness/brittleness luctility nalleability nardness strength and stiffness. udents should also be able to demonstrate knowled handling/machining. Pupils should also be able to moral dilemmas of selecting different materials for	dge and understanding of the behavioural characteri identify the environmental impact of using different	hould be able to identify stics of materials during
 Students should have increasing confidence in the knowledge required to perform the following: Bending and forming sheet metal and small bar. Material hardness testing Hot working/forging case hardening. Students should have knowledge of example local and national companies who utilise the above processes. 	 Application of knowledge through a mixture of short and long answer written questions, design challenges and production of technical drawings, Application of skills through completion of set practical tasks. Comparison of test results and summarising conclusions. 	 Future learning in Engineering Creating a specification when responding to an engineering brief (Y11) 1 Personal development - use of software, hardware and equipment, organisation, interpersonal skills.
		6 Cultural development – awareness of examples of engineering companies

		Standard Materials and processes	
	or take longer to make than the idea is worth. If can be quickly realised. Students should have engineering materials, and be far	be made of a material or via a process which is not a it can be made from standard materials and via star knowledge and understanding of the cost, availability niliar with the capabilities of commonly used engineer Application of knowledge through written short	ndard processes, then the idea /, form and supply of common ering processes.
	Students should have increasing confidence in the knowledge required to perform the following:	Application of knowledge through written short answer questions and production of technical drawings,	Future learning in Engineering
	 Shaping and finishing, filing, milling, use of abrasives Following a provided production plan Awareness of health and safety. Using PPE and conducting risk assessments. Adhere to workshop safety. Procedures. 	 Application of skills through completion of set practical tasks. 	Creating a Production plan and risk assessments when responding to an engineering brief (Y11)
Spring 1	 Know how to calculate using: metric units and standard form Ohm's law and resistance 	Examination style written questions.	 Prior learning in D&T (Y7-9) Measuring during manufacture of products Future learning in Engineering A Level and Vocational Engineering based subjects contain an
			substantial mathematical content (Y11)
			1 Personal development - use of software, hardware and equipment, application of mathematical principles.
			6 Cultural development – Evaluating the cost of

			ensuring safety in the work place, comparing to other cultures who do not provide safe working conditions.
	Unit	1 Manufacturing Engineering Products.	
	Unit 1 provides learners with the opportunity to in engineering products. Learners will deve equipmer	nterpret different types of engineering information in lop knowledge, understanding and skills in using a ra nt in order to manufacture and test an end product ion for an engineer in any of the vast array of engine	ange of engineering tools and
Spring 2	 Learners should be able to understand engineering drawings, and identify parts and/or components that will enable them to plan a final manufactured product, and should be able to: interpret standard engineering symbols, such as: diameter radius surface angle offset Tolerances read information, such as: third angle projection isometric views sectional views orthographic projection detail views interpret drawings to obtain information on: finishes title blocks 	Internally assessed Practical outcome and portfolio The total time allocated for assessed tasks is 20 hours. Candidates cannot exceed this time. Unit 1 tasks feature recommended timings that are for guidance only. Hand in date for the Practical outcome and portfolio is end of April.	 Future learning in Engineering Virtually all avenues of engineering disciplines involve being able to communicate via engineering drawings. During A Level or Vocational courses, when selecting replacement parts engineers need to verify that replacement parts are to the original specification. 1 Personal development - use of software, hardware and equipment, application of mathematical principles. 6 Cultural development – Evaluating the cost of

 calculations (linear dimensions and dimensions from a datum) understand sketches, such as: simple sketches giving clarification or information on construction details sketched engineering drawings of the manufactured parts produced to recognised standards interpret specific requirements provided in a manufacturing specification. 		ensuring safety in the work place, comparing to other cultures who do not provide safe working conditions. Understanding the effect of high automation in the manufacturing sector on the job market.
 Learners should be able to interpret key engineering information about manufacturing requirements from: data sheets, providing information such as feed and speed rates, tapping drill sizes, and finishes job sheets, including information about basic details of the parts to be made such as quantity, equipment, and tooling specifications, including specific requirements of the proposed engineered product tolerances, providing: acceptable levels of accuracy for individual parts justifications for errors and suggestions to overcome identified problems. Learners should be able to present engineering information they have extracted from drawings etc., such as: drilling speeds cutting speeds for correct materials tapping drill sizes finishing details tolerances 	 Application of knowledge through written short answer questions and production of technical drawings, Application of knowledge through written short answer questions and production of technical drawings, 	

➢ washers		
nuts & bolts		
 set screws machine screws 	Application of knowledge through written short answer questions and production of technical drawings, Application of skills through completion of set practical tasks.	Future learning in Engineering
Learners should be able to identify which materials are suitable for manufacturing specific parts of an engineering product and present the information in planning documentation. Learners should be aware of material stock and stock sizes.		 Virtually all avenues of engineering disciplines involve being able to communicate via engineering drawings. This unit allows learners to understand how an engineering design process is used to develop or adapt products, and how these solutions help to meet the needs and demands of clients, u environments. In this unit, learners will become familiar with developing problem-solving skills based on real problems and identified market. They will need to analyse a brief and specification and produce a solution that meets those requirements.		

	with the opportunity to consider the ethical dilemn	anding of how an engineered product is adapted and improv nas faced by modern design engineers, e.g. designed 'planne environmental impact.	ed obsolescence' verses long term
Autumn 1	 Learners should be able to produce a manufacturing specification that includes: precise details of manufacturing requirements, presented in textual form, and/or included on drawings specification points that must be interpreted before manufacturing work commences, such as: materials information technical details finishing details. 	Completion of own design project, specification assessed against criteria.	Application of learning completed during Y10 5 Moral development – Evaluating sustainability and the environmental impact of different design decisions.
Autumn 2Unit 2 Drawings2Virtually everything that we interact with from day to day has been through the design process. This un engineering design process is used to develop or adapt products, and how these solutions help to m environments. In this unit, learners will become familiar with developing problem-solving skills base They will need to analyse a brief and specification and produce a solution that meets those requirer This unit allows learners to experience and gain understanding of how an engineered prod		by has been through the design process. This unit allows lear apt products, and how these solutions help to meet the need iliar with developing problem-solving skills based on real pro and produce a solution that meets those requirements.	ls and demands of clients, users and blems and identified market needs.
	 Learners should be able to produce engineering drawings, using traditional instruments or CAD based software, of a final proposed engineered product to recognised standards including: a 3rd angle orthographic projection an isometric image. Learners should be able to produce engineering drawings that include: dimensions and associated symbols diameter, circumference, radius, height, depth, width conventions title block dimension lines extension lines 	Application of knowledge through examination style questions.	Application of learning completed during Y10 1 Personal development – 3D visualisation. Use of software, hardware and equipment, application of mathematical principles

This unit considers tural impacts of engineering eral.
Spring 1Describing engineering developments Learners should know and understand how engineering developments have an impact on the design of products and structures. These include developments in: > structural design, focusing on the development of bicycles > mechanical design, focusing on the development of theme park > rides > electronic design, focusing on the development of mobile > phone/smart technology.Explaining the effects of engineering achievements Learners should know and understand how the development of engineering products are impacted by changes in: > materials > smart technologies, including voice activated, Bluetooth and Wi-Fi > electronic and micro-electronic 	 Application of knowledge through examination style questions. Application of knowledge through examination style questions. Application of knowledge through examination style questions. 	 Application of learning completed during Y10 1 Personal development – 3D visualisation. Use of software, hardware and equipment, application of mathematical principles. 5 Moral development – Evaluating sustainability and the environmental impact of different design decisions and different technologies.

and have affected modern life,	
including:	
> in the home	
in society.	
Explaining how	
environmental issues	
affect engineering	
applications	
Learners should know and understand how	
the manufacture and use	
of engineered products have an	
environmental impact in terms of:	
materials development	
➢ costs	
transportation	
➤ their use	
their disposal	
recycling	
sustainability.	
Learners should know and understand how environmental issues	
 affect: 	
 engineering processes 	
 engineering products. 	
engineering products.	
Understanding materials,	
their properties, and their	
selection for specific	
purposes	
Learners should know and understand the	
following materials and	
their properties, and when they should be	
used for a specific	
purpose.	
Ferrous, e.g. mild steel, stainless steel,	
tool steel	

non-ferrous, e.g. brass, copper, aluminium	
 thermoplastics, e.g. acrylic, nylon, 	
HIPS	
 thermosetting plastics, e.g. urea 	
formaldehyde, silicon	
smart, e.g. thermochromic	
pigments/inks, shape memory alloy,	
nitinol wire	
composite, e.g. carbon fibre, Kevlar.	
Describe properties	
required of materials for	
engineering products	
Learners should know and understand the	
physical properties of	
materials, including their:	
tensile strength	
compressive strength	
 hardness toughness 	
 malleability 	
 Auctility 	
 conductivity 	
 corrosive resistance 	
environmental degradation	
elasticity	
and how they can be applied in an	
engineering context.	
Learners should know and understand the	
properties needed for the	
following engineering products:	
 mobile phones security alarm found in the home 	
 bicycles 	
 children's play areas. 	

		Unit 3 Examination Preparation	
	an engineer's role is finding functional solutions and developments in materials, processes an	sses is key to understanding the core principle of Er to problems and demands.
