

Engineering BTEC Level 3

Curriculum Intent 2023-2024

In engineering we look at developing critical thinking and practical skills and applying scientific and mathematical principles to resolve technical and design situations in order to provide students with a breadth and depth of knowledge and skills. We provide students with challenging opportunities through the process of working as part of a team to design, plan and produce an engineered product. We cover industry standard Computer Aided Design and Manufacture (CAD/CAM) which enables students to actively engage and take responsibility for their personal development in the process of engineering design to develop as effective and independent life-long learners. Students will learn to make decisions, consider sustainability and combine skills with understanding in order to design and make engineered products, exploring ways in which technical, economic and environmental, factors interact to shape designing and making. Students will develop an understanding of why analysing existing products will help produce practical solutions to needs. By understanding manufacturing process students can then design new and improved products which have an impact on technical capability, efficiency, environmental impact and safety factors.

The vast nature of disciplines and knowledge which come under the umbrella of Engineering, provide endless opportunities for a wide variety of employment and higher education possibilities. This course develops pupils' real skills, inspires and motivates, and helps them to prepare for the future and to take the next step towards an engineering education and/or career adventure. Engineering is defined as “the profitable application of science, maths and technology.” In other terms, engineers make products and processes work, and keep them working, in an affordable way.

We are all in some small way ‘engineers’, what this subject does is to foster and enhance that inherent talent by allowing students to achieve in the knowledge, tools, skills and expertise and to practice and develop that skill set and to apply it to increasingly challenging situations.

Community Involvement: Visiting speakers to discuss their business interest in Engineering. Ex-students following either apprenticeships and/or university courses.

The course specification claims that:

“This qualification provides a broad basis of study for the engineering sector. It has been designed to support progression to higher education when taken as part of a programme of study that includes other appropriate BTEC Nationals or A Levels.”

This is a theory and practice-based course:

- The course combines theoretical content with practical application.
- The use of mathematical skills is a key requirement and is tested in the examination.
- An understanding of underlying scientific principles is expected.

- An iterative approach to designing is encouraged.
- The acquisition of practical skills is still expected.

Trips and visits

NA

Assessment

Please see website for internal assessment record.

Unit 1 120 GLH	Unit 2 60 GLH	Unit 3 120 GLH	Unit 10 60 GLH
Engineering Principles	Delivery of Engineering Processes Safely as a Team	Engineering Product Design and Manufacture	Computer Aided Design in Engineering
External written 2 hr. Examination. Sat during May or June in Y12 & opportunity to retake in Y13	Internally assessed coursework	Externally set controlled task Sat during January in Yr12 and opportunity to retake in Y13	Internally assessed coursework

Homework

Specific homework will be set on a lesson-by-lesson, week by week basis. As the course requires theoretical knowledge and understanding there will be opportunity to embed learning via homework tasks.

Clubs and/or intervention

Catch up sessions offered at lunchtime and after school. Intervention will take place if a student misses' deadlines or is not engaging with the require effort or quality of work to satisfy their target grade. This will be tracked and communicated with parents/carers via Data Collection points, parent's evenings, phone call/email/letter correspondence.

Parental/Carer support

Parents are asked to support their child through this course, they should be encouraged to meet external deadlines and those set by the members of staff.

Helpful sources of information

Details of the course and support information, exemplar material and lesson content can be found on 'Teams' Specification can be found on:

Connections to future pathways

Careers: Mechanical technician, Maintenance technician, Production engineer, Automotive engineer, Maintenance engineer, Design engineer, Structural engineer, Aerospace engineer, Crash test investigator, Electrical engineer, Mechanical technician, Manufacturing engineer, Process engineer, Quality Engineer, Technical illustrator, Design documentation officer, CAD Draftsperson, CAD/CAM operator

Future learning: Mechanical Engineering; Transport engineering, Robotics and mechatronics, Production engineering, Electrical engineering, Design engineering, CAD/CAM engineering, Set Designer, CAD draughts person, Quantity Surveyor

Year 12 Overview

Term	Knowledge	Assessment	Connections to learning
Autumn 1	Big Idea: Rationale: The UK has a world class presence in many engineering sectors, based upon an army of knowledgeable, innovative and hard working engineers. The engineering sectors provide relatively stable and well-paid careers in a wide range of jobs. These units of study provide a broad basis of study designed to provide progression into higher education or employment.		
	Compressed air engine This project is used as a means to deliver experiences for pupils to develop basic engineering skills and understanding of processes via a hands-on approach. The completed engine is not formally assessed as part of the final grade. However, the processes undertaken, experiences and knowledge acquired is assessed via the units of the course. The theme of the air engine is used during units 2 and 10 throughout the course. The knowledge gained during completion of the engine is detailed in Unit 2, 3 and 10.	Ongoing informal assessment, allowing pupils to make mistakes, trial different approaches and 'learn from doing' providing a need led desire for knowledge.	Pupils may have some basic knowledge and workshop skills from KS3 and KS4 Engineering. 1 Personal development – 3D visualisation and drawing interpretation. Working accurately to tight tolerances.
	Unit 1 <ul style="list-style-type: none"> ➤ Solve, transpose and simplify equations. ➤ Indices and logarithms: ➤ laws of indices: $a^m \times a^n = a^{m+n}$, $a^{-n} = \frac{1}{a^n}$, $(a^m)^n = a^{mn}$ ➤ laws of logarithms: $\log A + \log B = \log AB$, $\log A^n = n \log A$, $\log A - \log B = \log \frac{A}{B}$ ➤ common logarithms (base 10), natural logarithms (base e). ➤ Application to problems involving exponential growth and decay. ➤ Linear equations and straight line graphs: ➤ linear equations of the form $y = mx + c$ ➤ straight-line graph (coordinates on a pair of labelled Cartesian axes, positive or negative gradient, intercept, plot of a straight line) ➤ pair of simultaneous linear equations in two unknowns. ➤ Factorisation and quadratics: 	The final assessment will be via one paper of 80 marks lasting two hours that will be set and marked by Pearson. Students will be assessed through a number of short- and long-answer problem-solving questions. Students will need to explore and relate to the engineering contexts and data presented. Assessment will focus on students' ability to solve problems that require individual and combined application of	<ul style="list-style-type: none"> ➤ Many aspects and concepts from CGSE Maths and Science are used in this unit. ➤ 1. Personal development – creating a chain of logical reasoning. 1 Personal development – Use of software,

<ul style="list-style-type: none"> ➤ multiply expressions in brackets by a number, symbol or by another expression in a bracket ➤ extraction of a common factor $ax+ ay$, $a(x + 2) + b(x +2)$ ➤ grouping $ax- ay+ bx- by$ ➤ quadratic expressions $a^2 + 2ab + b^2$ roots of an equation, including quadratic equations with real roots by factorisation, and by the use of formula. A2 Trigonometric methods ➤ Recall, perform procedures, demonstrate an understanding of and analyse information and systems involving: ➤ submerged surfaces in fluid systems: ➤ hydrostatic pressure and hydrostatic thrust on an immersed plane surface $F= \rho gAx$ ➤ centre of pressure of a rectangular retaining surface with one edge in the free surface of a liquid ➤ immersed bodies: ➤ Archimedes' principle ➤ determination of density using floatation methods ➤ relative density ➤ fluid flow in a gradually tapering pipe: ➤ flow rate (volumetric and mass) ➤ flow velocities (input and output) ➤ input and output pipe diameters ➤ incompressible fluid flow (continuity of volumetric flow $A_1v_1 = A_2v_2$ and mass flow $\rho A_1v_1= \rho A_2v_2$) ➤ Circular measure: ➤ Radian ➤ conversion of degree measure to radian measure and vice versa ➤ angular rotations (multiple number (n) of radians) ➤ problems involving areas and angles measured in radians ➤ length of arc of a circle $s= r\theta$ ➤ area of a sector $A= \frac{1}{2}r^2\theta$ ➤ Recall, perform procedures, demonstrate an understanding of and analyse information and systems, involving: ➤ Non-concurrent coplanar forces: ➤ representation of forces using space and free body diagrams ➤ moments ➤ resolution of forces in perpendicular directions $F_x= F\cos\theta$, $F_y= F\sin\theta$ ➤ vector addition of forces – resultant, equilibrant and line of action 	<p>mathematical techniques, and electrical, electronic and mechanical principles to solve engineering problems.</p> <p>The final assessment will be via one paper of 80 marks lasting two hours that will be set and marked by Pearson. Students will be assessed through a number of short- and long-answer problem-solving questions. Students will need to explore and relate to the engineering contexts and data presented. Assessment will focus on students' ability to solve problems that require individual and combined application of mathematical techniques, and electrical, electronic and mechanical principles to solve engineering problems.</p> <p>The final assessment will be via one paper of 80 marks lasting two hours that will be set and marked by Pearson. Assessment will focus on students' ability to solve problems that require individual and combined application of mathematical techniques, and electrical, electronic and mechanical principles to solve engineering problems.</p>	
<p>Unit 2</p> <p>Examine common engineering processes to create products or deliver services safely and effectively as a team. To know how to safely plan and produce a sand cast aluminium part. To know how to safely plan and produce a CNC milled rectangular aluminium block.</p>	<p>A report, prepared as an individual, detailing the engineering processes, sand casting and CNC milling.</p>	<p>Pupils who have previously studied Product Design or Engineering will be aware of the processes but lack knowledge of the details.</p> <p>1 Personal development Teamwork and planning. CAD software, hardware and equipment, application of</p>

			<p>mathematical principles.</p> <p>5 Moral development – Evaluating the effect of high tech manufacturing on the job market.</p>
	<p>Unit 10</p> <p>Computer Aided Design in Engineering</p> <p>Introduction to SolidWorks and re-using 2D Design software for the generation of engineering drawings. Sketching basic Parts in 2 and 3D. Assembling rectangular parts. Producing Engineering Drawings from Sketches.</p>	<p>Students produce drawings in response to set tasks. The drawings will be assessed against international drawing standards.</p>	<p>1 Personal development</p> <p>CAD software, hardware and equipment, application of mathematical principles.</p> <p>5 Moral development – Evaluating the effect of high-tech manufacturing on the job market.</p>
<p>Autumn 2</p>	<p style="text-align: center;">Big Idea:</p> <p>Rationale: Engineering products are part of our daily lives, from aircraft to the smallest electronic circuits found in medical devices. Engineering products are designed as a result of the identification of a need or opportunity, and then engineers using creative skills and technical knowledge to devise and deliver a new design or improvements to an existing design. For example, advances in the development of fuels led to the first internal combustion engine, and engineers have been improving its design ever since. In this unit, you will examine what triggers changes in the design of engineering products and the typical challenges that engineers face, such as designing out safety risks. You will learn how material properties and manufacturing processes impact on the design of an engineering product. Finally, you will use an iterative process to develop a design for an engineering product by interpreting a brief.</p>		

Unit 1

- Recall, perform procedures, demonstrate an understanding of and analyse information and systems involving:
 - Ohm's law VIR
 - Power $P= IV$, $P= I^2R$, $P =2VR$
 - Efficiency (η)=
 - Kirchhoff voltage and current laws $V= V_1+ V_2+ V_3$ or $\Sigma PD= \Sigma IR$, $I= I_1+ I_2+ I_3$
 - Charge, voltage, capacitance and energy stored in capacitors $Q= CV$, $W = 12CV^2$
 - RC transients (capacitor/resistor), charge and discharge, including exponential growth and decay of voltage and current, and time constant $\tau = RC$
 - Diodes, including forward and reverse bias characteristics: forward mode applications, including rectification, clamping, circuit/component protection
 - reverse mode applications, including zener diode for voltage regulation
 - Recall, perform procedures, demonstrate an understanding of and analyse information and systems involving:
 - DC power sources, including cells, batteries, stabilised power supply, photovoltaic cell/array and internal resistance
 - at least five resistors in series and parallel combinations $R_T= R_1+ R_2+ R_3$ $\frac{1}{R_T}= \frac{1}{R_1}+ \frac{1}{R_2}+ \frac{1}{R_3}$
 - DC circuits containing resistors and two power sources
- DC power source with at least two capacitors connected (series, parallel, combination).

The unit will be assessed through one paper of 80 marks lasting two hours that will be set and marked by Pearson. Students will be assessed through a number of short- and long-answer problem-solving questions. Students will need to explore and relate to the engineering contexts and data presented. Assessment will focus on students' ability to solve problems that require individual and combined application of mathematical techniques, and electrical, electronic and mechanical principles to solve engineering problems.

The unit will be assessed through one paper of 80 marks lasting two hours that will be set and marked by Pearson. Students will be assessed through a number of short- and long-answer problem-solving questions. Students will need to explore and relate to the engineering contexts and data presented. Assessment will focus on students' ability to solve problems that require individual and combined application of mathematical techniques, and electrical, electronic and mechanical principles to solve engineering problems.

Pupils may have some basic knowledge and workshop skills from KS3 and KS4 Engineering.

1. Personal development – creating a chain of logical reasoning

<p>Unit 2</p> <p>Transforming ideas and materials into products or services, including:</p> <ul style="list-style-type: none"> ➤ preparation processes undertaken before manufacture or service delivery – use of information sources and the creation of technical specifications, engineering drawings, work plans and quality control documentation with due regard to the scale of production (one-off, small batch, large batch, mass or continuous) ➤ standards relevant to the specialist area of study – guidelines/rules to ensure conformity in processes or outputs, e.g. BS 8888, reference charts (limits and fits, tapping drills, bend allowances), procedure specifications. ➤ Common processes used to create engineered products, including: ➤ fitting, machining, fabrication, casting, forging, moulding. ➤ Common processes used in engineering services, including: ➤ disassembly, inspection, testing systems servicing 	<p>Several sections produced for coursework portfolio: Part drawings to BS8888 Production plan Quality control plan.</p>	<p>Many aspects and concepts from GCSE Maths and Science are used in this unit.</p> <p>1 Personal development Teamwork and planning. <p>Unit 10</p> <p>Computer Aided Design in Engineering</p> <p>To know how to develop a three-dimensional computer-aided model of an engineered product that can be used as part of other engineering processes</p>	<p>A practical drawing activity to produce a 3D model of a product.</p>	<p>2D CAD Skills from KS3 & 4</p> <p>1 Personal development</p> <p>CAD software, hardware and equipment, application of mathematical principles.</p>

Big Idea

It is vital for students to develop their knowledge of what engineering is about in order for them to make informed decisions for their future position within the national and global economy. The UK is aiming to develop a new smart style of engineering for which engineers are needed, and the country is short of engineers. Engineering covers a wide range of disciplines that will enable students to apply their mathematical, scientific and engineering skills to real-life problems.

Spring
1

Unit 1

- Triangular measurement:
- functions (sine, cosine and tangent)
- sine/cosine wave over one complete cycle
- graph of $\tan A$ as A varies from 0° and 360° confirming $\tan A = \frac{\sin A}{\cos A}$ values of the trigonometric ratios for angles between 0° and 360°
- periodic properties of the trigonometric functions
- the sine and cosine rule
- application of vectors:—calculation of the phasor sum of two alternating currents—diagrammatic representation of vectors—resolution of forces/velocities
- Recall, perform procedures, demonstrate an understanding of and analyse information and systems, in the context of electrical circuits (networks) and devices, including:
 - conductance
 - conventional current flow
 - charge/electron flow $qI = \text{voltage}$
 - Coulomb's law $F = \frac{1}{4\pi\epsilon_0} \frac{q_1q_2}{r^2}$
 - factors affecting resistance, including conductor length, cross sectional area, resistivity and temperature coefficient of resistance $R = \rho \frac{l}{A}$, $R = R_0(1 + \alpha\Delta T)$
 - resistors, including function, fixed, variable, values
 - electric field strength, including uniform electric fields $E = \frac{V}{d}$, $E = \frac{Q}{4\pi\epsilon_0 r^2}$
 - factors affecting capacitance, including plate spacing, plate area, permittivity $C = \frac{Q}{V}$, $C = \frac{\epsilon_0 \epsilon_r A}{d}$
 - capacitors – typical capacitance values and construction, including plates, dielectric materials and strength, flux density, permittivity.

The unit will be assessed through one paper of 80 marks lasting two hours that will be set and marked by Pearson. Students will be assessed through a number of short- and long-answer problem-solving questions. Students will need to explore and relate to the engineering contexts and data presented. Assessment will focus on students' ability to solve problems that require individual and combined application of mathematical techniques, and electrical, electronic and mechanical principles to solve engineering problems.

Short examination style questions with written answers. Assessment will focus on students' ability to solve problems that require individual and combined application of mathematical techniques, and electrical, electronic and mechanical principles to solve engineering problems.

Many aspects and concepts from CGSE Maths and Science are used in this unit.

1 Personal development – Use of software, hardware and equipment, application of mathematical principles.

<p>Unit 2</p> <p>Health and safety requirements. To know the general contents of legislation and regulations or other relevant international equivalents and how they are satisfied by safe systems of work/procedures, including:</p> <ul style="list-style-type: none"> ➤ Current Health and Safety at Work legislation – duties of employers, employees, the Health and Safety Executive (HSE) and others, general prohibitions ➤ Current Reporting of Injuries, Diseases and Dangerous Occurrences Regulations (RIDDOR) – duties of employers ➤ Current Personal Protective Equipment (PPE) at Work Regulations – appropriateness if risk cannot be controlled in any other way, types of PPE, assessing suitable PPE given the hazard, supply, instructions/training, correct use, maintenance and storage ➤ Current Control of Substances Hazardous to Health Regulations (COSHH) ➤ Current Manual Handling Operations Regulations (MHOR) 		<p>A risk assessment report, prepared as an individual, detailing the health and safety requirements for the sand casting and CNC milling processes.</p>	<p>1 Personal development Teamwork and planning. CAD software, hardware and equipment, application of mathematical principles.</p> <p>5 Moral development – Evaluating the effect of high-tech manufacturing on the job market.</p>
<p>Unit 3</p> <p>Design triggers</p> <p>The triggers that stimulate engineering design activity, including: market pull/technology, profitability, innovation, market research, product/process performance issues, sustainability (carbon footprint)</p> <p>Design challenges Commercial-, regulatory or public policy-based trends that challenge current technology or design, including: reduction of energy wasted, energy wasted during operation, physical dimensions, energy, product life cycle costs</p> <ul style="list-style-type: none"> ➤ Equipment level and system level constraints and opportunities Factors that place limitations and offer opportunities at equipment level on the design of engineering products, including: ➤ reasons for selecting different solutions for equipment interfaces 		<p>8 Hours written External Assessment</p> <p>When dates are announced there will be an intensive preparation for the examination.</p> <p>This unit is assessed by a set task of 60 marks provided by Pearson and completed under supervised conditions. The supervised assessment period is eight hours once the assessment has started the learner must complete within five days. During the</p>	<p>1 Personal development 3D visualisation. Application of mathematical principles.</p> <p>5 Moral development – Evaluating the effect of high-tech manufacturing on the job market.</p>

	<p>Material Properties, modes of failure, protection and lubrication of engineering materials and components that impact upon their selection when designing an engineering product, including:</p> <ul style="list-style-type: none"> ➤ mechanical properties, physical, thermal, electrical and magnetic properties <p>Mechanical power transmission Characteristics of an engineering system that makes use of forces and movement that impacts on mechanical power transmission component selection when designing an engineering product, including linkages, mechanical motion, power sources, control of power transmission</p> <ul style="list-style-type: none"> ➤ Manufacturing processes Characteristics and effects of manufacturing processes that impact on the selection of engineering materials and components when designing an engineering product, including: ➤ processes for metals, polymers, ceramics (additive, casting, forming) ➤ processes for composites) ➤ scales of manufacture (one-off, small batch, large batch, mass, continuous <p>Interpreting a brief into operational requirements and analysing existing products</p>	<p>supervised assessment period, learners will complete a task that will require them to follow a standard development process of interpreting a brief, scoping initial design ideas, preparing a design proposal and evaluating their proposal.</p>	
<p>Spring 2</p>	<p style="text-align: center;">Big Idea</p> <p>It is ok to have a brilliant idea but making that idea into a reality is the job of an engineer. So many aspects need to be considered and good decisions made for the idea to become a successful realisation. It must function, it must be safe, it must be environmentally acceptable or friendly, it must be affordable it must be aesthetically pleasing, it must be tested for extreme events, etc. God decisions can only be made by knowledgeable and in many cases qualified engineers.</p>		
	<p>Unit 1</p> <ul style="list-style-type: none"> ➤ Recall, perform procedures, demonstrate an understanding of and analyse information and systems involving: ➤ waveform characteristics: ➤ sinusoidal and non-sinusoidal waveforms ➤ amplitude, time period, frequency ➤ instantaneous values: –peak/peak-to-peak–root mean square (RMS):$RMS\ voltage = \frac{2peak\ voltage}{\sqrt{2}}$–average values:average value 	<p>The unit will be assessed through one paper of 80 marks lasting two hours that will be set and marked by Pearson. Students will be assessed through a number of short- and long-answer problem-solving questions. Students will need to explore and relate to the engineering contexts and data</p>	<p>Many aspects and concepts from CGSE Maths and Science are used in this unit.</p> <p>1 Personal development – Use of software, hardware and equipment,</p>

	<p>$= 2\pi \times$ maximum value – form factor: form factor = RMS value / average value</p> <ul style="list-style-type: none"> ➤ AC principles: ➤ determination of values using phasor and trigonometric representation of alternating quantities ➤ graphical and phasor addition of two sinusoidal voltages ➤ reactance and impedance of pure R, L and C components ➤ total impedance of an inductor in series with a resistance ➤ total impedance of a capacitor in series with a resistance ➤ rectification, including half wave, full wave ➤ . Recall, perform procedures, demonstrate an understanding of and analyse information and systems involving: ➤ magnetic field: ➤ flux density B, $\phi =$ ➤ magnetomotive force (mmf) and field strength (H), $F_m = NI$, $H =$ ➤ permeability μ_r, $BH = \mu \mu$ ➤ B/H curves and loops ➤ ferromagnetic materials ➤ reluctance $\phi = \frac{MS}{\mu}$ ➤ magnetic screening ➤ magnetic hysteresis ➤ electromagnetic induction and applications: ➤ induced electromotive force (emf) ➤ relationship between induced emf, magnetic field strength, number of conductors turns and rate of change of flux ➤ relationship between number of turns, magnetic length, permeability, and inductance ➤ eddy currents ➤ principle of operation of electric motors and generators including efficiency ➤ self-inductance, including inductance of a coil, energy stored in an inductor, induced emf $\frac{d\phi}{dt} = NI$, $W = \frac{1}{2} LI^2$, $E = Blv$, $\frac{d\phi}{dt} = -N \frac{d\phi}{dt}$ ➤ mutual inductance (principals of transformer operation – step up/down, primary and secondary current and voltage ratios, including efficiency.) $\frac{V_1}{V_2} = \frac{N_1}{N_2}$ ➤ application of Faraday's and Lenz's laws. 	<p>presented.
